

## WATER SOLUBLE

### DESCRIPTION

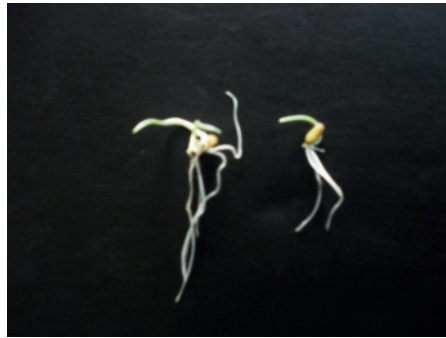

**HUMINSEED WSP** consists of a suspension with bioactive humic acids and fulvic acids. As a water-soluble, high-quality plant growth and germination conveyor, **HUMINSEED WSP** is suitable for all agricultural and horticultural crops. The treatment of seed with a humic acid solution stimulates the cell membranes as well as the metabolic activities and thus increases the germination rate.

### ORIGIN

**HUMINSEED WSP** is obtained by alkaline extraction from German Leonardite (highly oxidized soft brown coal) and from aquatic fulvic acids. These have been created by geological processes and biological humification of organic material.

# HUMIN<sup>WSP</sup>Seed<sup>®</sup>

## Humic Substance Based Seed Germination Accelerator

### BENEFITS

**HUMINSEED WSP:** Important plant enzymes are immediately stimulated and thus increases the germination rate. The powerful root formation increases the nutrient uptake capacity. The plants thus strengthened are much less susceptible to diseases.

- Stimulation of metabolic activity
- Stimulation of plant enzymes
- Stronger root formation
- Increase nutrient uptake
- Increase of germination rate and germ growth

### DIRECTIONS FOR USE

The best results with **HUMINSEED WSP** are obtained when the seeds are treated with a humic acid solution between 24-72 hours before sowing. Solution consumption for seed treatment is 0,5 - 1 litres per 100 kg of seeds.

**HUMINSEED WSP** is added into the solution last. It is recommended to apply the working solution on the day of its production.

### FORM OF DELIVERY

Bag  
1/25 kg

Carton Box  
1/10 kg
